EV CHARGERS AND HOME BATTERIES IN FLANDERS AND BRUSSELS

EV chargers and home batteries.
Well chosen. Installed with care.

From clear advice and a transparent quotation to a tidy installation and ongoing support.

WITH SOLUTIONS FROM EASEE AND ZENDURE

For homes, businesses and shared car parks

COMPANY BROCHURE

WHY LAADNATIE

Understand first. **Then install.**

You do not need to be a technical expert. Tell us what matters to you; we review your connection, consumption and future plans. You get a charger or home battery that suits you, with clear explanations for every choice.

We remain your contact from your first question through to handover. We prepare the work, carry out the installation and setup, and follow up the inspection. We are happy to help afterwards too.

A dedicated team

Jonas and Joey handle your project themselves, from preparation to aftercare.

OUR OWN INSTALLATIONS

The finish matters too.

A tidy installation, right down to the details. We take care over the finish.

WHAT YOU CAN COUNT ON

Clear agreements. **Confidence in your choice.**

01

Tailored advice

We explain what suits you and why.

02

Clear quotation

You know what is included and what you pay.

03

Ongoing support

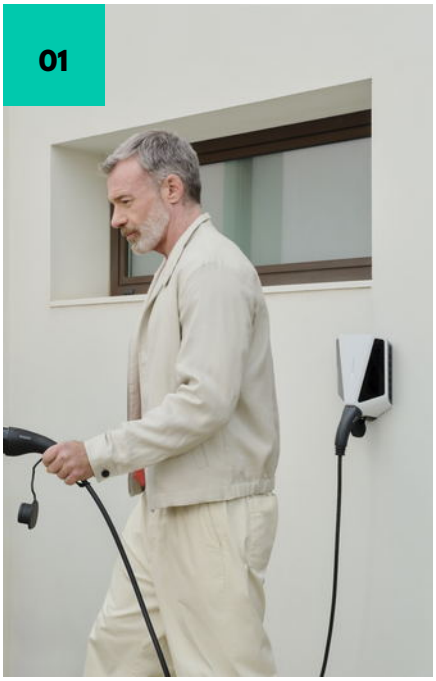

A question after installation? Just call or email us.

HOW WE HELP

The right solution starts **with your situation.**

We review your consumption, connection, available space and future plans. You get a proposal in which the technical elements work together.

01

HOME CHARGING

Set off with confidence every day

A charger that suits your car, connection and daily charging routine.

Matched to your daily routine

02

BUSINESSES AND CAR PARKS

Charging that can grow with you

From one charger to a shared site, with reliable metering, access management and room to expand.

Management for multiple users

03

HOME BATTERY

Make more of your solar energy

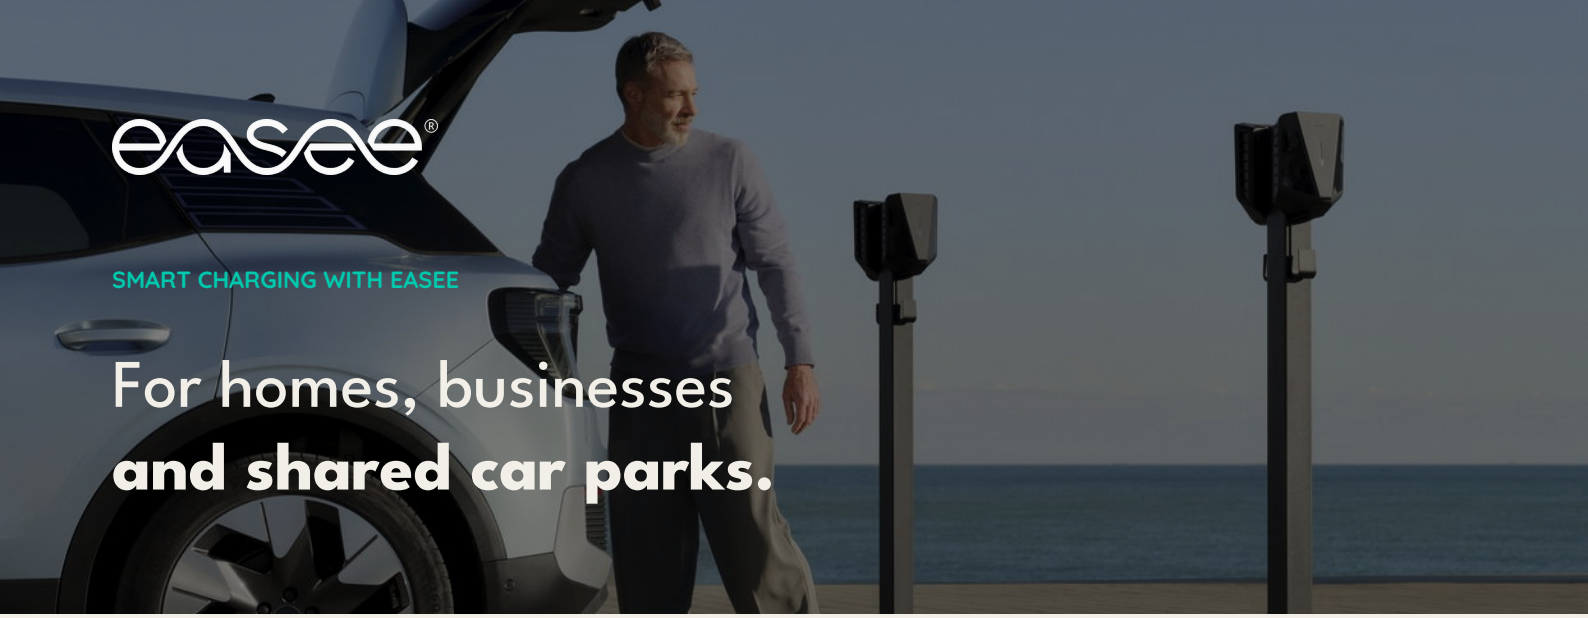

Store solar energy for later. We choose storage and power based on your consumption and plans.

Tailored storage and power

ONE COORDINATED TECHNICAL PROPOSAL

Everything planned together.

From the distribution board and cable route to the app, settings and handover guidance.

SMART CHARGING WITH EASEE

For homes, businesses **and shared car parks.**

We help you choose based on your car, connection and users. Charge Max and Charge Pro combine everyday charging convenience with a MID-certified energy meter. We handle installation, setup and clear guidance.

01 HOMES AND COMPANY CARS

Charge Max

Convenient home charging, with a MID-certified meter for verifiable costs. Useful when your employer or company reimburses your home charging.

UP TO 22 kW / MID-CERTIFIED METERING

02 BUSINESSES AND SHARED CAR PARKS

Charge Pro

For sites with multiple users. We match access, available power and any session payments to your car park and future plans.

UP TO 22 kW / MID-CERTIFIED METERING

Charging power depends on your car and connection.

OUR OWN ONLINE MANAGEMENT PLATFORM

Home charging, reimbursed automatically.

Our own platform lets your employer or company reimburse your home charging costs. Laadnatie charges no subscription or platform fees for this service.

We check your business charging card, metering and connection. Fees charged by an external charging card provider remain separate.

ZENDURE HOME BATTERIES

The right storage.
The right power.

From a compact start to a more powerful system, we choose based on your consumption, solar panels and connection. You store solar energy for when you need it.

COMPACT AND MODULAR

SolarFlow 2400 AC+

2.4 kWh built in / 2.4 kW output

With up to five 2.88 kWh AB3000L modules, nominal storage reaches 16.8 kWh. Inverter power remains 2.4 kW.

WITH EXISTING SOLAR PANELS

SolarFlow 4000 Mix AC+

About 8 kWh built in / 4 kW output

AC-coupled storage for an existing solar installation. Need more storage? We compare complete Mix units with other suitable setups.

FOR DIRECTLY CONNECTED SOLAR PANELS

SolarFlow 4000 Mix Pro

About 8 kWh / 4 kW AC / up to 8 kW DC input

Two MPPT inputs receive directly connected PV strings. We check panel voltage, current and your connection. Its own AC output remains 4 kW.

More inverters. More storage and power.

Multiple inverters can operate in parallel to increase both storage and power. For example, 6 × SolarFlow 2400 AC+ provide up to 14.4 kW and 14.4 kWh of built-in storage; AB3000L modules add storage. We check the connection and distribute this example over three phases: two units per phase, each on its own protected circuit.

For Mix, we also combine complete units: two offer about 16 kWh and 8 kW, three about 24 kWh and 12 kW. We match the distribution, protection and controls to your installation.

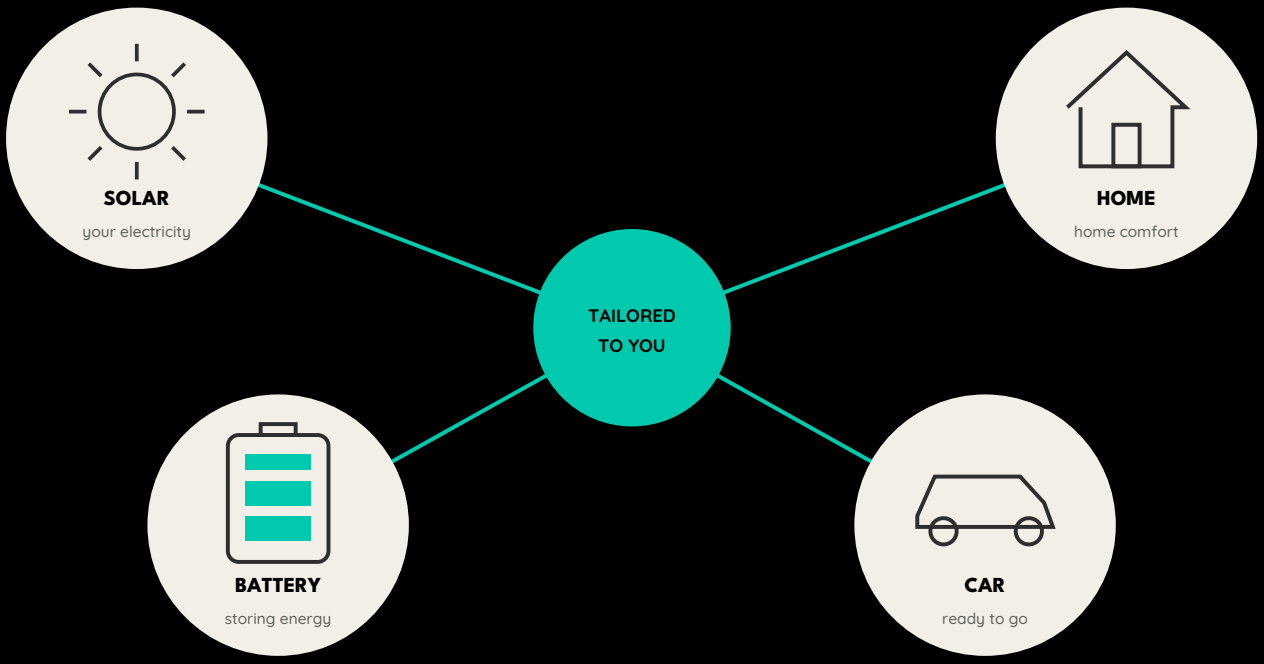

Permanently connected. Installed by us.

Your quotation clearly includes suitable energy metering, protection, settings, battery inspection and the Bebat contribution. Storage figures are nominal; reserve and losses reduce usable energy. Zendure provides a 10-year product warranty under its terms.

EVERYTHING PLANNED TOGETHER

Home, car and battery **in balance.**

When do you charge your car? What electricity do you want to keep for the evening? We discuss your priorities and the metering and settings your installation needs.

What is possible depends on the chosen metering and control equipment. We explain which solution suits you.

01 Protecting your connection

With an Easee Equalizer, the charger can adjust power when your home needs more electricity. We include suitable metering in your quotation.

02 Using solar energy

We assess when direct charging makes sense and when to store electricity. The chosen controls must support those priorities.

03 Storing energy

We discuss your preferred battery reserve and charging times. If you have a dynamic tariff, we review which schedule suits your consumption and contract.

04 Guidance and support

We show you how the apps work, the settings we chose and what you can adjust. We are happy to help later too.

€ 250
SAVING EXCL. VAT

EV charger and battery together?

When installed together, you receive a €250 combination saving excluding VAT, clearly shown in your quotation.

FOUR CLEAR STEPS

Your project, **step by step.**

From your first question to handover guidance, we support you step by step. You know what we have agreed and who to contact.

01

Reviewing your situation

Tell us what you need and share your questions. A few photos and your consumption data help us give focused advice.

02

Free technical review

We check your connection, distribution board, cable route and mounting location through photos, a video call or a site visit.

03

Careful installation

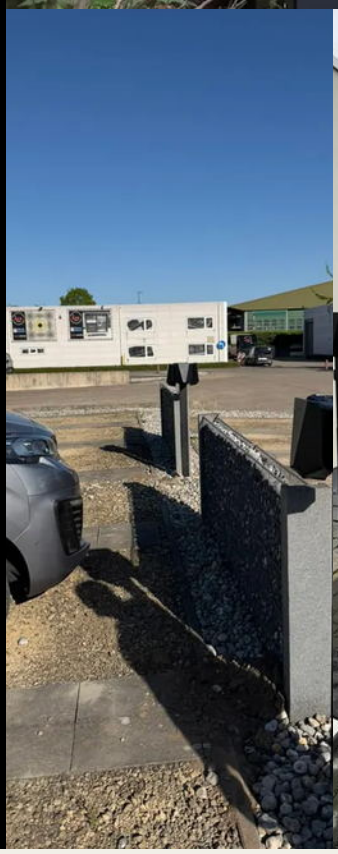

We install and protect the system, configure it and test operation. We always discuss any adjustments and their price beforehand.

04

Guidance and follow-up

We take time to explain the apps and daily use, arrange the agreed inspection and remain available for your questions.

WARRANTY AND AFTERCARE

easee® **5 years**

Warranty on the complete fixed Easee charging installation, under the applicable terms.

ZENDURE **10 years**

Product warranty on the inverter and battery modules, under Zendure's terms.

Your home battery is also inspected by an independent inspection body.
